## SUMMARY

Proven ability to plan and lead projects, design experiments, analyze time series and signals, conduct algorithmic research and development in machine learning and artificial intelligence, and communicate insights to stakeholders. Generated a 21% gain in mass spectrometry accuracy and an estimated annual cost savings in excess of $500k.

## PROFESSIONAL EXPERIENCE

**Research & Development Engineer** June 2018 - Present
*INFICON* *Syracuse, New York*

- Completed 11 studies and projects — leading and scoping data science efforts in cross-functional environments.
- Conducted studies to examine and establish theoretical foundations for the GC–MS self-calibration subsystem — contributing to a larger product development effort with a projected relative revenue growth of 52%.
- Synthesized data for chemical detection and monitoring systems via SciPy.optimize, SciPy.stats, SciPy.integrate, and PySwarms — creating simulation-based compound identification A/B tests that cover 50% of the sensors.
- Led technical reviews to define mathematical foundations for mass spectrometry algorithms — documenting their implementation logic and assumptions, designing an A/B test using SciPy.stats and Nolds, and delivering an improved algorithm using SciPy.optimize and Statsmodels — yielding a 21% increase in sensor accuracy.
- Developed a computational self-calibration algorithm for mass spectrometery sensors utilizing the fastDTW, SciPy.interpolate, SciPy.optimize, and Nolds libraries — projecting annual cost savings in excess of $500k.
