SUMMARY

Recognized data science leader with graduate education in computer science and a proven record of delivering innovative state-of-the-art solutions for industry-leading chemical sensing technologies. Demonstrated experience in planning and scoping research projects, designing experiments (e.g., A/B tests), analyzing time series and signals, developing custom machine learning and artificial intelligence models, interfacing with cross-functional teams, communicating insights to stakeholders, and deploying models to production.

PROFESSIONAL EXPERIENCE

Data Scientist

INFICON

June 2018 - Present

Syracuse, New York

- Directed technical developments with significant manufacturing optimization innovations for semiconductor sensor technologies utilizing the fastDTW, Nolds, Statsmodels.tsa, SciPy.interpolate, and SciPy.optimize Python libraries — driving projected annual manufacturing cost savings in excess of US\$500k.
- Led technical reviews to define mathematical foundations for sensor processing algorithms — documenting their implementation logic and assumptions, designing an A/B test using SciPy.stats and Nolds, and delivering an improved algorithm using SciPy.optimize and Statsmodels — yielding a 21% increase in sensor accuracy.
- Managed studies examining and establishing theoretical foundations for chemical detection and monitoring systems — contributing to a larger product development effort with 52% expected revenue growth.
- Executed simulation-based A/B tests for compound identification with 50% chemical detection and monitoring system coverage — synthesizing chemical data via SciPy.optimize, SciPy.stats, SciPy.integrate, and PySwarms.
